An Introduction to Forensic Mental Health Evaluation

Aaron Norton, LMHC & LMFT

In an ever evolving health care landscape, many clinical mental health counselors are looking for ways to diversify their practice. Forensic mental health evaluation is an interesting, impactful, and lucrative option for counselors who wish to branch into a new area of expertise. This course will cover various types of forensic specialties, ethical and legal guidelines for practice, options for training and certification, and how to build a forensic practice. It will also dispel common myths about scope of practice of clinical mental health counseling as it relates to administering and interpreting psychological tests and conducting forensic evaluations.

Aaron Norton, LMHC & LMFT, provides services in private practice to individuals, couples, and families at Integrity Counseling in Largo, Florida. Aaron has 15 years of experience in the human services field in a variety of positions including counseling, case management, and supervision, in both outpatient and residential treatment centers, public health, government agencies, and private practice settings. Aaron is also an adjunct professor at University of South Florida. He has served on a number of prestigious boards including the Public Relations Committee for Suncoast Mental Health Counselors, the National Board of Forensic Evaluators, and the Florida Mental Health Counselors Association.
